Responding to new technologies and the federal mandates inspired by these technologies, this manual guides facility managers and engineers in the most efficient management of energy. The purpose of the space report is to familiarize personnel with the operation and service instructions of the Coolant System Flush and Purge Unit. The report STDR presents a description of the unit, its controls and functions; servicing instructions for preventive maintenance; and applicable safety precautions associated with its operation. (Author). The purpose of the report is to familiarize personnel with the operation and service instructions for the Fuel Flush and Purge Unit and the Oxidizer Flush and Purge Unit. The report contains a description of the units, their controls and functions; servicing instructions for preventive maintenance; and applicable safety precautions associated with their operation. (Author). Over 1,000 total pages INTRODUCTION 1-1.1 Purpose. This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other

aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.
