Hematology and Oncology – backed by the unmatched authority of Harrison's A Doody's Core Title for 2019! Featuring a superb compilation of chapters related to hematology and oncology derived from Harrison's Principles of Internal Medicine, Nineteenth Edition (including content from the acclaimed Harrison's DVD, now available here in print), this concise, full-color clinical companion delivers the latest knowledge in the field backed by the scientific rigor and authority that have defined Harrison's. You will find 57 chapters from more than 75 renowned editors and contributors in a carry-anywhere presentation that is ideal for the classroom, clinic, ward, or exam/certification preparation. Features:

- Each chapter contains relevant information on the genetics, cell biology, pathophysiology, and treatment of specific disease entities
- Chapters on hematopoiesis, cancer cell biology, and cancer prevention reflect the rapidly growing knowledge in these areas
- Integration of pathophysiology with clinical management
- High-yield board review questions make this text ideal for keeping current or preparing for the boards
- Valuable appendix of laboratory values of clinical importance

Cancer Pharmacology and Pharmacotherapy Review is the first book devoted entirely to providing the 'must-know' facts on each cancer agent—including their pharmacokinetics, FDA-approved indications, toxicity, interactions, and other important information that is commonly found on board examinations and essential for any clinician or practitioner to review. The authors, an oncologist and

two pharmacists, have developed a handy question-and-answer format to present the material in digestible bursts. As the pharmacology section continues to represent a major portion of the medical oncology exam and a key component on oncology MOC exams, this portable study guide will help prepare anyone looking to fine-tune their knowledge on cancer drugs before the test. Not to mention, with recent advancements in the field of cancer treatment, it has become more cumbersome to recall and maintain essential knowledge of every cancer therapeutic—making this book not only an exam resource but also a handy quick reference for oncologists and pharmacists alike.

KEY FEATURES

- Conveniently organized and arranged by drug class and subtypes for easier recall and classification
- Includes proper dosage adjustments to account for liver and kidney dysfunction
- Features tables throughout that provide quick reference regarding FDA-approved medications
- Simplified diagrams and illustrations facilitate the pharmacokinetic processes

Lanzkowsky's *Manual of Pediatric Hematology and Oncology*, Seventh Edition remains the go-to clinical manual for the treatment and management of childhood cancers and blood disorders. It is a comprehensive book on patient management, replete with algorithms and flow diagrams, and includes a new section on vascular anomalies. Reflecting the considerable advances in the treatment and management of hematologic and oncologic diseases in children, the seventh edition of this successful clinical manual is entirely updated to incorporate all current treatment protocols, new drugs, and management approaches. Its concise and easy-to-read format, again, enables readers to make accurate diagnoses and treatment decisions without having to reference larger medical textbooks. Designed to be easily readable and highly practical with over 400 illustrative tables, along with color diagrams and figures

New chapter on Pediatric Vascular Anomalies New

content on 'blood avoidance' programs to honor religious preferences Discussions of new drugs and immunological therapies for cancers, along with discussions of increasing use of cytokine stimulants for hematologic disorders Includes practical genetic evaluations providing a deeper understanding and advances in management of bone marrow failure diseases Written by clinicians from the National Cancer Institute and other leading institutions, this comprehensive, clear, concise oncology handbook is designed specifically for quick bedside consultation. It covers all malignancies and offers busy clinicians practical guidelines on daily patient management. The user-friendly format features tables, charts, bullet points, and algorithms. The thoroughly updated Second Edition includes new chemotherapeutic agents, dosages, and treatment regimens and the latest clinical trials data. New chapters focus on targeted therapies and complementary and alternative medicine in oncology. The Bethesda Handbook of Clinical Oncology, Second Edition is also available for PDAs. See Media Products section for details. Fast access to the latest diagnostic and therapeutic protocols in pediatric hematology and oncology. Comprehensive, yet concise, it presents essential information on the diagnosis and management of the five most common pediatric malignancies, chemotherapeutic drug information, transfusion protocols, and much more. Presents a wealth of easy-to-read charts, tables, and algorithms that expedite evaluation, differential diagnosis, and treatment. Displays key data in a handy hematology/oncology drug formulary. Concisely covers the basics of transfusion, including how to order, product preparation, and reactions. Presents a concise review of sickle cell disease and its complications. Discusses specific guidelines for history taking, physical examinations, laboratory assessment, and treatment for the full range of bleeding disorders. Covers the

evaluation of children with suspected malignancy, including emergent interventions. Provides information on supportive care, including the care of central venous catheters. Uses a wealth of charts for quick access to the side effects, monitoring of, and effects of common chemotherapeutic drugs. Offers a comprehensive review of chelation for iron and lead toxicity. An essential guide to the treatment and management of lung cancer Lung cancer remains the leading cause of cancer deaths worldwide, attributed mostly to environmental and behavioral factors. However, a diagnosis of lung cancer no longer means inevitable death. The new standards of care and a greater understanding of the etiology and biology of the disease has led to breakthroughs in patient survival rates that were not seen in the past. Standards of Care: Lung Cancer provides a solid foundation in the new principles approaching this disease. Presented in an accessible, quick-to-digest format, and written by leading experts in a variety of medical fields, this authoritative guide covers all the new procedures and treatment options and the latest advances in diagnosis and treatment, including immunotherapy and oncogene inhibition, and more. This is an essential resource for both practitioners and students studying for the boards or certification. Features Covers the most current treatments Continuous online updates on guidelines, new therapies, and studies Includes checklists, case studies, learning objectives, and clinical pearls Bibliography with listings of studies and trials Serves as an ideal resource for practice and board review For those preparing for certification or recertification in hematology or oncology, Hoffman and Abeloff's Hematology-Oncology Review is a single-volume source of authoritative, up-to-date exam preparation. This unique question and answer review helps you succeed on today's board exams with more than 1,000 board-style questions, answers, and

rationales; comprehensive coverage of essential exam topics, and online practice tests. Includes 1,000+ board-style questions with answers and rationales explaining both correct and incorrect answers. Covers a broad range of topics compiled by experts in hematology and oncology, including cancer biology and genomics, immunotherapy, hematologic malignancies, solid tumor malignancies, non-malignant hematology, and supportive care. Uniquely designed as both a standalone review and a study companion to Abeloff's Clinical Oncology and Hematology: Basic Principles and Practice. This issue of Hematology/Oncology Clinics, Guest Edited by Dr. John P. Leonard, is devoted to Mantle Cell Lymphoma. This issue is one of six selected each year by our series Consulting Editors, George P. Canellos and Edward J. Benz. Topics discussed in this important issue include: Molecular pathogenesis of Mantle Cell Lymphoma; MCL and cell cycle dysregulation; Heterogeneity in MCL biology and outcomes; Watch and wait in mantle cell lymphoma; Limited stage mantle cell lymphoma; Initial and consolidation therapy for younger patients with MCL; Approach to the initial treatment of older patients with MCL; Current and future approaches to the use of minimal residual disease monitoring in the treatment of patients with MCL; Bruton's Tyrosine Kinase inhibitors for treatment of Mantle Cell Lymphoma; BTKi resistance in MCL; Blastoid MCL; Allogeneic transplant and CAR-T cell therapy in MCL; Quality of life considerations and chronic therapy in management of patients with MCL; and Key clinical and translational research questions. Blood transfusions are an important part of hematologic care. This issue of Hematology/Oncology Clinics will focus on transfusion medicine and will include articles on: RBC Transfusions: Conclusions from Clinical Trials and the Establishment of Evidence-based Guidelines for Adults, Platelet Transfusions: Conclusions from Clinical Trials and the Establishment of Evidence- and/or Experience-

based Guidelines for Adults, Use and Overuse of Plasma Products: Establishment of Evidence- and/or Experience-based Guidelines for Plasma Transfusion in Adults, Stem Cell Mobilization/Collection: Coordination Between Hem/Onc, Transplant, and Transfusion Services, Management of Patients with Sickle Cell Disease Using Transfusion Therapy: Guidelines and Complications, and many more exciting articles. Hematology and Oncology – as only Harrison’s can cover it Featuring a superb compilation of chapters on hematology and oncology that appear in Harrison’s Principles of Internal Medicine, Eighteenth Edition, this concise, full-color clinical companion delivers the latest knowledge in the field backed by the scientific rigor and authority that have defined Harrison’s. You will find content from renowned editors and contributors in a carry-anywhere presentation that is ideal for the classroom, clinic, ward, or exam/certification preparation. Features Organized into twelve sections: The Cellular Basis of Hematopoiesis; Cardinal Manifestations of Hematologic Diseases; Anemias, Myeloproliferative Disorders; Hematologic Malignancies; Disorders of Hemostasis; Biology of Cancer; Principles of Cancer Prevention and Treatment; Neoplastic Disorders; Endocrine Neoplasia; Remote Effects of Cancer; and Oncologic Emergencies and Late Effects Complications Each chapter contents relevant information on the genetics, cell biology, pathophysiology, and treatment of specific disease entities Chapters on hematopoiesis, cancer cell biology, and cancer prevention reflect the rapidly growing body of knowledge in these areas Integration of pathophysiology with clinical management 153 high-yield questions and answers drawn from Harrison’s Principles of Internal Medicine Self-Assessment and Board Review, 18e Content updates and new developments since the publication of Harrison’s Principles of Internal Medicine, 18e 55 chapters written by physicians who are

recognized experts in the field of hematology and oncology Helpful appendix of laboratory values of clinical importance Concise, portable, and user-friendly, The Washington Manual Hematology and Oncology Subspecialty Consult, 4th Edition, provides quick access to the essential information needed to evaluate a patient on a subspecialty consult service. This edition offers state-of-the-art content, including coverage of new anti-cancer drugs and new biomarkers and therapeutic targets. Ideal for fellows, residents, and medical students rotating on hematology and oncology subspecialty services, the manual is also useful as a first-line resource for internists and other primary care providers. Key Features: Thoroughly revised to include new standards in the treatment of malignancies and hematologic disorders, mechanisms of action of new therapeutic agents, and the current use of molecular prognostic factors. A new chapter on immunotherapy reviews approved and potentially approved new therapies that help you improve clinical outcomes for your patients. A reorganized, consistent format throughout ensures that you can find what you need quickly and easily. Comprehensive coverage addresses all areas of hematology and oncology. Symptoms, signs, and problems encountered in daily practice are presented in a quick-reference bulleted format. Updated references are provided for readers who would like additional information on a particular topic. Written by fellows and junior faculty from the Washington University School of Medicine in St. Louis. Now with the print edition, enjoy the bundled interactive eBook edition, which can be downloaded to your tablet and smartphone or accessed online and includes features like: Complete content with enhanced navigation Powerful search tools and smart navigation cross-links that pull results from content in the book, your notes, and even the web Cross-linked pages, references, and more for easy navigation

Highlighting tool for easier reference of key content throughout the text Ability to take and share notes with friends and colleagues Quick reference tabbing to save your favorite content for future use This new textbook has an international authorship and is a practical, up-to-date resource for clinicians responsible for the care of children with oncologic and malignant hematologic disease. It is specifically designed for practicing oncologists and hematologists, pediatricians with an interest in childhood cancer and trainees seeking a systematic approach to these disorders. This new textbook has an emphasis on the visual presentation and ease of reading of contemporary and comprehensive information for children's cancers and contains detailed tables, fact boxes and illustrations. The textbook begins with an introduction to the general principles of the scientific foundation and treatment of childhood cancers and hematological malignancies. Separate sections are then devoted to descriptions of central nervous system tumors, hematological malignancies and solid tumors of childhood which encompass epidemiology, cellular and molecular biology, cancer genetics, immunology, pharmacology and the findings of clinical trials. For each area of science covered, key original references and reviews are highlighted to direct further reading. Diagnostic, biological, and therapeutic issues are integrated into each tumor-specific chapter, with evidence supporting the current rationales for risk stratification and the development of novel therapies. A final section then explores supportive care, palliative care, late effects considerations and psychosocial issues as relate to children's cancer. For more than 30 years, the highly regarded Secrets Series® has provided students and practitioners in all areas of health care with concise, focused, and engaging resources for quick reference and exam review. Pediatric Hematology & Oncology Secrets, 2nd Edition, offers practical, up-to-

date coverage of the full range of essential topics in this dynamic field. This highly regarded resource features the Secrets' popular question-and-answer format that also includes lists, tables, pearls, memory aids, and an easy-to-read style - making inquiry, reference, and review quick, easy, and enjoyable. The proven Secrets Series® format gives you the most return for your time - succinct, easy to read, engaging, and highly effective. Fully revised and updated, including discussions of supportive care of children with cancer and psychosocial aspects of care. New chapters on Precision Medicine and Systems Biology; Health Equity and Disparities in Pediatric and Adolescent/Young Adult Oncology; Transfusion Medicine; Neoplastic Hematopathology; Hemophagocytic Lymphohistiocytosis; and more. Top 100 Secrets and Key Points boxes provide a fast overview of the secrets you must know for success in practice and on exams. Bulleted lists, mnemonics, practical tips from global leaders in the field - all providing a concise overview of important board-relevant content. Portable size makes it easy to carry with you for quick reference or review anywhere, anytime. Enhanced eBook version included with purchase. Your enhanced eBook allows you to access all of the text, figures, and references from the book on a variety of devices. The revised guide to the diagnosis, management, and treatment of blood disorders and cancer in children Children with blood disorders and cancer are a unique population that require specialized diagnostic considerations and management. The Handbook of Pediatric Hematology and Oncology has been designed to provide clinicians of all levels with practical guidance through an up-to-date algorithmic approach to these conditions. Assembled by a team of experts from the world-class Children's Hospital & Research Center Oakland, this updated third edition: Presents up-to-date management and treatment guidelines for the most common pediatric

blood disorders and malignancies Provides an updated algorithmic approach for the diagnosis and management of the most common conditions and suggested readings Utilizes rapid-referral tables containing visual representations of symptoms, lab findings, differentials, and treatment guidance Incorporates case studies covering different hematologic and oncologic conditions, such as hemolytic anemia, sickle cell disease, hemophilia, neuroblastoma, and sarcomas of the soft tissue and bone Includes a useful formulary that lists chemotherapy agents, dosing, mechanism of action, pregnancy category, indications, and side effects Covers transfusion medicine, stem cell transplantation, management of central venous catheters, acute pain management, oncologic emergencies, and chemotherapy basics With its direct guidance and portable design, the Handbook of Pediatric Hematology and Oncology: Children's Hospital & Research Center Oakland, Third Edition, will prove an invaluable resource to medical students, trainees and residents, pediatric hematology and oncology nurses, pediatricians, and early-career providers in pediatric hematology/oncology. Hematology, 6th Edition encompasses all of the latest scientific knowledge and clinical solutions in the field, equipping you with the expert answers you need to offer your patients the best possible outcomes. Ronald Hoffman, MD, Edward J. Benz, Jr., MD, Leslie E. Silberstein, MD, Helen Heslop, MD, Jeffrey Weitz, MD, John Anastasi, MD, and a host of world-class contributors present the expert, evidence-based guidance you need to make optimal use of the newest diagnostic and therapeutic options. Consult this title on your favorite e-reader with intuitive search tools and adjustable font sizes. Elsevier eBooks provide instant portable access to your entire library, no matter what device you're using or where you're located. Make confident, effective clinical decisions by consulting the world's most trusted

hematology reference. Access the complete contents online at www.expertconsult.com, with a downloadable image collection, regular updates, case studies, patient information sheets, and more. Apply all the latest knowledge on regulation of gene expression, transcription splicing, and RNA metabolism; pediatric transfusion therapy; principles of cell-based gene therapy; allogeneic hematopoietic stem cell transplantation for acute myeloid leukemia and myelodysplastic syndrome in adults; hematology in aging; and much more, thanks to 27 brand-new chapters plus sweeping updates throughout. Find the information you need quickly and easily thanks to a completely reworked organization that better reflects today's clinical practice. Visualize clinical problems more clearly with new and updated images that reflect the pivotal role of hematopathology in modern practice. Benefit from the experience and fresh perspective of new editor Dr. Jeffrey Weitz, Professor of Medicine at McMaster University School of Medicine and Executive Director of the Thrombosis and Atherosclerosis Research Institute in Ontario. Expert, hands-on guidance for the practicing oncologist—from the leader in the field of cancer management—completely updated to reflect the latest advances Comprehensive and authoritative, The MD Anderson Manual of Medical Oncology delivers everything you need to accurately diagnose and effectively treat a wide range of cancers—including leukemia, lymphoma, myeloma, lung and breast cancer, genitourinary carcinoma, melanoma, and sarcoma. This unmatched resource emphasizes practical, actionable steps to cancer treatment, providing "to the point" recommendations, chapter summary boxes, tables, charts, expert opinion and patient education boxes, practice tips, cases, and prescriptive advice. The new format of this updated edition quickly guides you to the topic, the affiliated relevant chapter, new findings affecting

clinical practice, and reference/evidence. This fourth edition features: NEW Q&A, cases, patient education information, and expert advice Expanded coverage of immunotherapy treatment—written by the 2018 Nobel Prize-winner for immunology Access to continually updated online content A comparative table with guidelines from the European Society of Medical Oncology and the American Society of Clinical Oncology An emphasis on recent developments in precision medicine and immunotherapies Plus important NEW chapters on: Cord blood transplant Haploidentical cell transplantation Cellular therapy in allogeneic hematopoietic cell transplantation Pediatric cancers Molecular biomarkers and cancer Immune-oncology Targeted therapies in cancer Applied biostatistics Oncocardiology Pulmonary complications of cancer associated thrombosis This new edition of Handbook of Pediatric Hematology and Oncology: Children's Hospital & Research Center Oakland features practical guidance on how to handle common inpatient and outpatient challenges seen in pediatric hematology and oncology. Designed as a rapid reference to the latest diagnostic and therapeutic protocols, the text is short and didactic and supplemented with practical algorithms and case studies throughout. Completely revised and updated, there are brand-new chapters on subjects including bone marrow transplantation, pain management and palliative care. Comprehensive, yet concise, the handbook presents essential guidelines on the diagnosis and management of the most common pediatric blood disorders and malignancies, in addition to chemotherapeutic drug information and transfusion protocols. Designed for medical students, residents, and fellows, this user-friendly portable reference is also the perfect companion on the ward for pediatric hematology and oncology nurses. The revised guide to the diagnosis, management, and treatment of blood disorders and cancer

in children Children with blood disorders and cancer are a unique population that require specialized diagnostic considerations and management. The Handbook of Pediatric Hematology and Oncology has been designed to provide clinicians of all levels with practical guidance through an up-to-date algorithmic approach to these conditions. Assembled by a team of experts from the world-class Children's Hospital & Research Center Oakland, this updated third edition: Presents up-to-date management and treatment guidelines for the most common pediatric blood disorders and malignancies Provides an updated algorithmic approach for the diagnosis and management of the most common conditions and suggested readings Utilizes rapid-referral tables containing visual representations of symptoms, lab findings, differentials, and treatment guidance Incorporates case studies covering different hematologic and oncologic conditions, such as hemolytic anemia, sickle cell disease, hemophilia, neuroblastoma, and sarcomas of the soft tissue and bone Includes a useful formulary that lists chemotherapy agents, dosing, mechanism of action, pregnancy category, indications, and side effects Covers transfusion medicine, stem cell transplantation, management of central venous catheters, acute pain management, oncologic emergencies, and chemotherapy basics With its direct guidance and portable design, the Handbook of Pediatric Hematology and Oncology: Children's Hospital & Research Center Oakland, Third Edition, will prove an invaluable resource to medical students, trainees and residents, pediatric hematology and oncology nurses, pediatricians, and early-career providers in pediatric hematology/oncology. The essential therapy guide to cancer, hematologic disorders, and supportive care—updated with the latest treatment regimens Hematology-Oncology Therapy, Third Edition, is an up-to-date, comprehensive therapy guide that delivers more than 800 treatment regimens in a

succinct, uniform format. Supported by the latest practice guidelines, peer-reviewed literature, and insights from experts in the field, this peerless resource integrates extensive information critical to both office- and hospital-based practice of hematology and oncology. Hematology-Oncology Therapy is divided into four sections: Cancer Regimens: Covers administration, toxicity, dose modification, monitoring, supportive care, and the efficacy of commonly used and recently approved therapeutic regimens, and includes expert opinion and critical information on epidemiology, pathology, work-up, and staging, as well as survival data Antiemetics, Growth Factors, Dose Modification and Drug Preparation: Provides in-depth coverage of antiemetics, growth factors, and the administration and formulation of anti-cancer drugs Supportive Care, Complications, and Screening (online): Offers thorough coverage of topics commonly encountered in clinical hematology-oncology practice Selected Hematologic Diseases (online): provides an authoritative guide to therapy for principal diseases in consultative hematology The entire content is now online at AccessHemOnc.com. The online platform created for the third edition will be continually updated, including newly approved regimens. This mini-textbook uses the same successful question-and-answer format of the Secrets(R) series and covers all the latest treatments for a wide variety of neoplastic disease. Sections cover general concepts, general hematology, a new addition, cancer genetics. This edition also includes malignant hematology, general care of the cancer patient, solid tumors, pediatric oncology, HIV-related diseases, and new and updated chapters that address the legal and psychosocial aspects of cancer care, such as end-of-life decision making and managing depression. Unresectable stage III non-small cell lung cancer -- Treatment complications -- Surveillance -- Summary -- First-Line

Systemic Therapy for Non-Small Cell Lung Cancer -- Key points -- Introduction -- Patient evaluation overview -- Treatment -- Summary -- Addendum -- Second-Line Chemotherapy and Beyond for Non-Small Cell Lung Cancer -- Key points -- First-line treatment -- Maintenance therapy -- Chemotherapy as second-line treatment -- Chemotherapy in the second-line setting and beyond -- Single agent versus combination regimens -- Docetaxel -- Pemetrexed

In this issue of Hematology/Oncology Clinics, guest editors Drs. Edward J. Benz, Jr. and Vijay G.

Sankaran bring their considerable expertise to the topic of Thalassemia. Top experts in the field provide an overview of the history, epidemiology, pathogenic mechanisms, and clinical management of the thalassemia syndromes. Contains 16 practice-oriented topics

including molecular basis and genetic modifiers of thalassemia; fetal hemoglobin in thalassemia; clinical complications and their management; iron chelation in thalassemia; fertility and pregnancy in women with transfusion-dependent thalassemia; gene therapy and genome editing in thalassemia; emerging medical therapies for thalassemia; and more. Provides in-depth clinical reviews on thalassemia, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews. This issue of Hematology/Oncology Clinics of North America is devoted to Head and Neck Cancer. Guest Editor Alexander Colevas, MD has assembled a group of expert authors to review the following topics:

Epidemiology of SCCHN; Genetics of Head and Neck Cancers; Molecular Biology of Head and Neck Cancers; Quality of Life in Head and Neck Cancer Treatment; Nasopharyngeal Carcinoma; Evolving Surgical Techniques in SCCHN; Radiation Oncology New Approaches in SCCHN;

Thyroid Gland Malignancies; Sequential and Concurrent Chemoradiation; Systemic Chemotherapy for SCCHN Focus on New targets and Agents; EGFR Inhibition in SCCHN; Diagnostic and Therapeutic Assessment Imaging in Head and Neck Cancer; Salivary Gland Cancers; Immunotherapy in SCCHN; Human Papillomavirus in SCCHN; and Supportive Care Issues in SCCHN Treatment and Survivorship: Dental, Nutrition, Speech and Swallowing, Depression. Now in its third edition, *Oncology Board Review: Blueprint Study Guide and Q&A* is designed to help you prepare for the American Board of Internal Medicine (ABIM) Medical Oncology Certification Exam. This comprehensive digital resource has been revised to include new treatment regimens, clinical guidelines, and other advancements impacting the field as well as updated board-style Q&A. Dedicated sections cover hematological malignancies and solid tumors with a templated chapter approach highlighting epidemiology, etiology and risk factors, diagnostic criteria, staging, signs and symptoms of the disease, prognostic factors, indications for treatment, and special considerations. Later sections address other topics found on the exam, including cancer genetics and tumor biology, supportive and palliative care, bone marrow transplantation, and biostatistics. With more than 240 practice questions and detailed rationales, *Oncology Board Review* gives you the tools to study your way and the confidence to pass the first time! Key Features: Aligns with the latest ABIM Medical Oncology Certification Exam blueprint Provides a comprehensive yet concise review of all hematologic malignancies and solid tumors Covers anticancer therapies, clinical research methodology, survivorship and palliative care, and more areas found on the exam Revised to include new treatment recommendations and FDA approvals Includes end-of-chapter assessment questions with detailed rationales - a total of more than 240 questions throughout *The Essential Therapy Guide to Cancer, Hematologic*

Disorders, and Supportive Care--Updated with the Latest Treatment Regimens More than 500 treatment regimens Hematology-Oncology Therapy, Second Edition is an up-to-date, comprehensive therapy guide that delivers more than 500 treatment regimens in a succinct, uniform manner. The unique tabular design allows you to instantly locate and implement the proper treatment regimen. Supported by the latest practice guidelines, peer-reviewed literature, and the opinion of experts, Hematology-Oncology Therapy integrates extensive information that is critical to both office- and hospital-based practice of hematology and oncology. Hematology-Oncology Therapy is divided into three sections: Oncology: Provides detailed information about the administration, supportive care, toxicity, dose modification, monitoring, and efficacy of commonly used and recently approved chemotherapeutic regimens, drugs, and biological agents Supportive Care, Drug Preparation, Complications, and Screening: Consists of topics commonly encountered in clinical hematology-oncology practice, such as chemotherapy-induced nausea, oncologic emergencies, radiation complications, cancer pain management, cancer screening, and much more Selected Hematologic Diseases: Delivers an authoritative guide to therapy for the principal diseases in consultative hematology This edition of Hematology-Oncology Therapy is enriched by the updating of all chapters as well as the addition of several new chapters; the new "Expert Opinion," which provides recommendations and guidance from experts on the use of treatment regimens; and inclusion of the latest regimens. Designed as a quick read for both students on a hematology/oncology rotation and others who want to know more about the specialty, Blueprints Hematology and Oncology covers the essentials that every practitioner will need to know. Pocket-sized and practical, this book covers the most common conditions students are likely to encounter. It focuses

on the essential content students need to know during a rotation allowing for a fast, easy read. Twenty-five multiple-choice review questions are included to help students test their understanding of the subject. The book also features a valuable appendix on career and residency opportunities. Also included are sections on medications and their toxicities and common hematological and oncological emergencies. Perfect for medical students -- physician assistants, nurse practitioners and related health professionals will also find Blueprints valuable. This issue of Hematology/Oncology Clinics will focus on The Treatment of Myeloid Malignancies with Kinase Inhibitors. Articles will focus on: Targeting aberrant signaling in myeloid malignancies: promise versus reality; The development and use of imatinib for the treatment of chronic myelogenous leukemia; Mechanisms of resistance to ABL kinase inhibition in CML and the development of next generation ABL kinase inhibitors; Tyrosine kinase inhibitors in the treatment of systemic mastocytosis and hypereosinophilic syndrome; The development and use of JAK2 inhibitors for the treatment of myeloproliferative neoplasms (MPN); Mechanisms of resistance to JAK2 inhibitors in MPN; Kinase inhibitor screening in myeloid malignancies; and more! This book, in Q&A format, addresses a wide range of clinically relevant topics and issues in Nonmalignant Hematology, or "Benign Hematology," with a view to offering a robust, engaging tool that will assist every hematologist and oncologist (pediatric and adult equally) in making decisions during day-to-day practice. The entire spectrum of the specialty is covered in more than 60 exceptional chapters written by acknowledged authorities in the field. The content is organized into well-designed broad sections on red cell disorders, platelet and coagulation disorders, coagulopathy in systemic diseases, thromboembolic disease and its management (including

surgical), immune system and related disorders, hemostasis and thrombosis during pregnancy and in the newborn and elderly, and Transfusion Medicine. A key aspect of the book is the opportunity it affords expert physicians to express well-reasoned opinions regarding complex issues in Nonmalignant Hematology. Readers will find that it provides a practical and immediately applicable compendium of answers to often complex and vexing questions. It will appeal to residents, fellows, house officers and more experienced practitioners around the globe. This book identifies the various ethical challenges that arise in pediatric hematology/oncology and provides the necessary tools to overcome these challenges. Aiming to expand upon and strengthen providers' knowledge and experience in pediatric health care ethical issues, the text positions providers to be beneficial resources to faculty, staff, patients, and families within their institution. It presents a multidisciplinary approach to sound ethical practices that is necessary to effectively care for these patients and their families. The book reviews the principles of ethical decision-making, the unique difficulties in using children as research subjects, common ethical conundrums involved in providing end-of-life care, and general moralities of professional practice. Written by experts in their fields, *Ethical Issues in Pediatric Hematology/Oncology* is an innovative and valuable resource for clinicians, practitioners, and trainees who work in the field of pediatric hematology/oncology. Given that there have been considerable advances in the treatment and management of oncologic diseases in children, the fifth edition of this successful clinical manual will be entirely updated to incorporate all current protocols and developments. This edition will be a comprehensive book on patient management, replete with algorithms and flow diagrams on diagnosis and management. Its concise and easy-to-read format will

enable readers to make accurate diagnoses and permit them to treat patients without having extensive previous hematologic/oncologic experience. A list of normal values at various ages in children, providing an extremely useful reference for patient management is included. Selected for inclusion in Doody's Core Titles 2013, an essential collection development tool for health sciences libraries Offers a concise, systematic approach to all pediatric hematologic and oncologic disorders in one reference manual Easy-to-read format: multiple tables, charts, and flow-diagrams for diagnosis and management of pediatric hematologic and oncologic disorders Clear presentation by practicing clinicians, who are also academic researchers, of recent developments in molecular genetics, cytogenetics, immunology, transplantation, and biochemistry Co-Authors Jack E. Saux III, M.D., Margaret Saux, Pilar M. Morrison RPh, Melissa Pennebaker CRNP This is a quick reference how to manual. It provides an outline for those teaching a new CRNP. For the CRNP it is a go to book for daily use. It also addresses some of the more difficult topics frequently encountered daily such as difficult patients and/or families and burn-out. Modern care of those with blood or malignant disorders is very much a team effort. This book is designed to help our colleagues who have chosen to be Nurse Practitioners to have a quick reference guide to many of the common clinical conundrums encountered in clinical practice. It is supposed to help not only with the technical nuts and bolts but also to help handle the emotional trauma of this field as well. It is not intended to replace the input of collaborating physicians. In fact, the test section has been designed to force communication and teaching. This text, written by fellows and reviewed by faculty at Memorial Sloan-Kettering Cancer Center, covers novel therapies and current techniques in this rapidly evolving field. Each vignette presents a real

patient case and a clinical photo-graph; then challenges readers to formulate a diagnosis and treatment plan. The next page reveals the correct diagnosis, discusses the disorder, clinical course, and outcome of the patient, and concludes with 3-4 clinical pearls distilled from the case. The continuous advances in our understanding of hematology and neo plastic disorders have made possible this third volume of reviews. Their purpose is to summarize investigations which have defined new concepts, and, it is hoped, stimulate new ideas. In the choice of subjects, we have attempted to retain the balance between academic and clinical interests. We are grateful to the contributors, who have maintained the high standards set in the earlier volumes, and for feedback from readers. Both have helped to orient the direction of this series. It was a reader who pointed out that the title of the two earlier volumes, *The Year in Hematology*, was misleading since it suggested a detailed review of trends and findings limited to the last year. In response to this valid comment, *The Year . . .* has been changed to *Contemporary . . .* and the scope has been expanded to encompass the kindred disciplines of hematology and oncology. Another editor, Franco M. Muggia, has been added to provide additional expertise for the latter field. The title of the present and future volumes has been changed to *Contemporary Hematology/Oncology*. It has been pointed out to us that considerable ingenuity will be needed to find topics not already covered. We believe that the papers in the present volume have met this challenge. As before, the readers' comments concerning *Contemporary Hematology/Oncology* will be appreciated. Joseph LoBue Albert S. Gordon Robert Silber Franco M. A unique point-of-care guide to clinical hematology-oncology that answers the most frequently asked questions *Hematology-Oncology Clinical Questions* is the single-best resource for quickly converting the most current data and

research into practical, diagnostic real-time solutions. This unique book answers more than 60 of the clinical hematology-oncology questions most commonly asked of the authors during consultation. The content flow simulates the consultation process:

Question...Data...Synthesis...Solution. The initial chapters prepare you with essential background fundamentals of hematology-oncology. Subsequent chapters are divided into tumor type, beginning with solid tumor types, and then hematological malignancies. Each chapter includes: •Key Concepts•The Clinical Scenario•The Action Items•Pearls Hematology-Oncology Clinical Questions will prove to be a powerful tool to help learners from all points of the clinical spectrum understand the basic concepts of caring for a cancer patient. The chapters in the first section focus on individual presenting symptoms and/or findings and describe the best approach to sort through the differential diagnosis, determine whether the problem is hematologic or oncologic, and to rapidly ascertain the definitive diagnosis. The chapters in the second section each describe a specific disease with a focus on evaluation and management. Fulfilling the void with a Hematopathology book that integrates clinical and experimental studies with diagnostic criteria, *Neoplastic Hematopathology: Experimental and Clinical Approaches* provides an overview of the discipline of hematopathology that connects the field with recent advances in immunology research and current clinical practice in the treatment of lymphomas and leukemias. Designed for both trainees and specialists in pathology and hematology-oncology, *Neoplastic Hematopathology: Experimental and Clinical Approaches* has separate sections on laboratory techniques, diagnostic hematopathology, treatment and stem cell transplantation. Expert chapter authors address both myeloid and lymphoid tumors, and provide much needed coverage in transplant biology. A study guide highlights

key chapter points, making the text suitable for boards review in hematopathology and hematology-oncology. In this issue of Hematology/Oncology Clinics, guest editor Dr. Harold J. Burstein brings his considerable expertise to Breast Cancer.
