This timely expose has serious implications for everyone who owns or drives a car. The auto industry has been leaving consumers in the dark about auto defects, and instead, issues "secret warranties" to their dealers. The authors tell consumers how to protect themselves. Each year car manufacturers release new production models that are unique and innovative. These cars begin as concepts then go through the process of prototyping. The process of creating a new model can take years, involving extensive testing and refining of aerodynamics, safety, engine components, and vehicle styling. The production model is the result of this lengthy process, and its new technologies reflect the latest engineering standards as well as market trends. The 2014 Passenger Car Yearbook details the key engineering developments in the passenger vehicle industry of the year. Each new car model is profiled in its own chapter with one or more articles that were previously published and written by the award-winning editors of Automotive Engineering International. The novel engineering aspects of each new model are explored in depth. Interviews with key developers and engineers are included for some of the models,

providing inside details about how initial ideas evolved in the cars that consumers drive. Published for enthusiasts who are interested in new car models and their technologies, as well as practicing automotive engineers who are interested in new engineering trends such as hybrid systems, powertrain designs, automotive design, lightweighting, and materials, and new engineers who want an overview of current trends, the 2014 Passenger Car Yearbook also:

- Provides a single source for information on the key engineering trends of one year.
- Allows the reader to skip to chapters that cover specific car models that interest them, or read about all models from beginning to end.
- Makes for dynamic reading, with its large number of big, full-color images and easy-reading magazine format.

'Cool Companies' turns on its head the idea that measures to avert global warming and climate change will pile massive costs on

to the industrial sector. It shows how the smartest companies have been able to make money through the improvements that reduce their greenhouse gas emissions. Industry is going to have to adjust to the new tax and regulatory regimes being introduced around the world, aimed at reducing emissions and meeting internationally agreed targets. The more far-sighted companies have recognised the opportunities this offers. Joseph Romm shows how successful they have been in taking them. Romm profiles more than 50 companies, and describes their experiences in the context of their corporate strategies. All are leaders in their sectors and many are household names such as Xerox, Toyota, BP (now BP Amoco), DuPont, Compaq and 3M. They grasped early on the strategic importance of cutting emissions. By working to do so, through increased efficiency, new technologies and improved processes, they have cut their energy costs and boosted their productivity, often dramatically - improvements which translate straight down to the bottom line. The message is clear. Cool Companies - those prepared to overhaul their policies and innovate - are much more likely to thrive in the new climate for business, while those which have to be dragged backwards into the future will face higher costs and tougher competition. The Japanese motor industry worldwide. There are few industry sectors in the world today with more potential than renewable and hydrogen energy. Clean, green and renewable energy technologies are receiving immense emphasis from

investors, environmentalists, governments and major corporations. Today's high prices for crude oil, coal and natural gas will increase the demand for renewables of all types. A wide variety of technologies are being researched, developed and implemented on a global basis, from Stirling engines to wind power, from advanced nuclear plants to geothermal and fuel cells. Our analysis also includes tar sands (oil sands), oil shale, fuel cells, clean coal, distributed power, energy storage, biofuels and much more. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. Visible knowledge is a tool nearly lost in the West, but it has been used to great effect by Toyota in its 50-year march from noncompetitiveness to its current status as the second largest automobile company in the world. It is key for the 50% growth in market share Toyota plans for this decade despite worldwide overcapacity in the auto business. This book presents the reader with a systematic approach to create, capture, and display knowledge in a way that allows development teams to optimize the design of their products and production processes. Visible knowledge not only applies to knowledge management, but provides a means of collaboration to facilitate better decision-making in the development process. This book has evolved out of a manuscript that Allen Ward, the foremost U.S. expert on lean product development, was writing at the time of his untimely death. It is not intended to be a treatise of Lean product development

methods. Quite the opposite—it is focused on one small piece, "visible knowledge." It is, however, one technique that Dantar Oosterwal and Durward Sobek have found to be very effective at Harley-Davidson and other places, and a tool that can make a difference whether used by itself or as a starting point for a larger journey into Lean product development. In completing this work, Oosterwal and Sobek kept the aim true to Allen's original intent. The preface and first three chapters are essentially Allen's original intellectual contribution. They have made editorial changes to improve readability and clarity of explanation. Throughout, they have attempted to preserve Allen's voice in the writing, even keeping the narrative in first person as it was originally written. They have also added a fourth chapter that highlights some practical ways to apply the ideas presented in earlier chapters, illustrated with case examples from their experience.
