Modelling Organisational Evolution and Change - a Complex Systems Modelling Perspective

Jan 21 2020 The cumulative output of these papers emphasise that modelling organisational evolution and change from a complex systems perspective makes a significant contribution to organisational studies and brings new insight and understandings both to theory and practice. It is also true that the studies and modelling presented in these papers has pushed forward the boundaries of complex systems science, again both in theory and practice. The papers have made new findings and understandings of the processes, drivers and outcomes of the evolution of social systems and organisations through the development of new evolutionary models and frameworks that contribute both to organisational and complexity sciences. They have through a number of innovations based in complexity science addressed questions in organisational science concerning the importance of knowledge and learning, together with questions about the evolution and survival of organisations and industries. These innovations have played back into and developed

complexity science.

Treating Complex Trauma May 05 2021 In Treating Complex Trauma, renowned clinicians Mary Jo Barrett and Linda Stone Fish present the Collaborative Change Model (CCM), a clinically evaluated model that facilitates client and practitioner collaboration and provides invaluable tools for clients struggling with the impact and effects of complex trauma. A practical guide, Treating Complex Trauma organizes clinical theory, outcome research, and decades of experiential wisdom into a manageable blueprint for treatment. With an emphasis on relationships, the model helps clients move from survival mindstates to engaged mindstates, and as a sequential and organized model, the CCM can be used by helping professionals in a wide array of disciplines and settings. Utilization of the CCM in collaboration with clients and other trauma-informed practitioners helps prevent the re-traumatization of clients and the compassion fatigue of the practitioner so that they can work together to build a hopeful and meaningful vision of the future.

Radical Decision Making: Leading Strategic Change in Complex Organizations Mar 27 2023 Radical Decision Making offers a controversial new framework to the conventional strategic change management conversation. While many approaches provide a discussion on a singular level, Dr. Hruška blends theory and research of decision making and social interaction to develop a consistent framework of strategic change.

Managing Change in Organizations Mar 03 2021 This book explores a broad range of perspectives on change management, encouraging critical reflection and making sense of a complex field of theories. The unique approach is based around three key perspectives of change: how, what and why.

Leading Continuous Change Mar 15 2022 Change has become constant, complex, multifaceted, and overwhelming. To meet this challenge, Bill Pasmore presents four keys to help leaders decide where and how to most effectively focus their change initiatives.

Leading Change Mar 23 2020 From the ill-fated dot-com bubble to unprecedented merger and acquisition activity to scandal, greed, and, ultimately, recession -- we've learned that widespread and difficult change is no longer the exception. By outlining the process organizations have used to achieve transformational goals and by identifying where and how even top performers derail during the change process, Kotter provides a practical resource for leaders and managers charged with making change initiatives work.

Measuring Social Change Oct 30 2020 The social sector is undergoing a major transformation. We are witnessing an explosion in efforts to deliver social change, a burgeoning impact investing industry, and an unprecedented intergenerational transfer of wealth. Yet we live in a world of rapidly rising inequality, where social sector services are unable to keep up with societal need, and governments are stretched beyond their means. Alnoor Ebrahim addresses one of the fundamental dilemmas facing leaders as they navigate this uncertain terrain: performance measurement. How can they track performance towards worthy goals such as reducing poverty, improving public health, or advancing human rights? What results can they reasonably measure and legitimately take credit for? This book tackles three core challenges of performance faced by social enterprises and nonprofit organizations alike: what to measure, what kinds of performance systems to build, and how to align multiple demands for accountability. It lays out four different types of strategies for managers to consider—niche, integrated, emergent, and ecosystem—and details the types of performance measurement and accountability systems best suited to each. Finally, this book examines the roles of funders such as impact investors, philanthropic foundations, and international aid

agencies, laying out how they can best enable meaningful performance measurement.

Organizational Transitions Jun 18 2022 USA. Monograph investigating methodologies for managing complex changes within organization development - deals with transition management, and examines management techniques for choosing an intervention strategy and for carrying out an evaluation plan.

Web 2.0-Based E-Learning: Applying Social Informatics for Tertiary Teaching Apr 16 2022 "This book deals with Web 2.0 and how social informatics are impacting higher education practice, pedagogical theory and innovations"--Provided by publisher.

Enabling institutional environments conducive to livelihood improvement and adapted investments in sustainable land and water uses Apr 04 2021 This report reviews the main global trends in land and water uses, policies and investments that have taken place over the last decade and identifies the institutional arrangements that have been the most conducive to sustainable and equitable use of these resources. The report focuses particularly on family farmers, who have limited access to key resources (land, water, credit and infrastructure). It pays special attention to their common challenges and needs, but also to their diverse conditions. It provides evidence-based information on the institutional conditions needed to ensure inclusive land and water programmes, and to upscale such programmes at local levels. It is based on a systematic review of official documents and academic papers and on detailed case studies, often grounded in the authors' own significant knowledge. The report is organized in three main parts. The first section begins with a review of the main global trends affecting land and water uses over the last decade, and links them to the public policies and types of private investment that encouraged such trends. The main structural drivers of growing pressures on water resources and land availability are discussed, including population growth, diet changes, climate change, urbanization and biofuel development. The report discusses the direct effects of these drivers, including water scarcity, increased global competition for land use and the degradation of existing resources, on land and water availability. It then examines the main types of private investments and public policies that drive these trends: large-scale land acquisition, reassertion of large-scale infrastructure programmes for surface water irrigation, public subsidies and private initiatives that stimulate access to groundwater. The second section of the report focuses on the impacts of global changes, policies and investments on farmers' livelihoods and water use. It reviews the numerous beneficial impacts of irrigation on poverty reduction emphasizing that they are highly contextual and unequally shared across social groups. It documents the widening gap between irrigated and rainfed areas, and the risks of a medium-term crisis for agricultural economies that are based on groundwater irrigation. It emphasizes that existing policies are poorly tailored to farmers' needs. Lastly, the section documents the complex relationship between migration and increased pressures on land and water. The third section of the report charts the way forward for more sustainable and equitable management of land and water. It takes stock of policies inspired by the principles of integrated water resources management (IWRM).

Functions of a Complex Variable Feb 20 2020

Systems Thinking For Social Change May 17 2022 Donors, leaders of nonprofits, and public policy makers usually have the best of intentions to serve society and improve social conditions. But often their solutions fall far short of what they want to accomplish and what is

truly needed. Moreover, the answers they propose and fund often produce the opposite of what they want over time. We end up with temporary shelters that increase homelessness, drug busts that increase drug-related crime, or food aid that increases starvation. How do these unintended consequences come about and how can we avoid them? By applying conventional thinking to complex social problems, we often perpetuate the very problems we try so hard to solve, but it is possible to think differently, and get different results. Systems Thinking for Social Change enables readers to contribute more effectively to society by helping them understand what systems thinking is and why it is so important in their work. It also gives concrete guidance on how to incorporate systems thinking in problem solving, decision making, and strategic planning without becoming a technical expert. Systems thinking leader David Stroh walks readers through techniques he has used to help people improve their efforts to end homelessness, improve public health, strengthen education, design a system for early childhood development, protect child welfare, develop rural economies, facilitate the reentry of formerly incarcerated people into society, resolve identity-based conflicts, and more. The result is a highly readable, effective guide to understanding systems and using that knowledge to get the results you want.

[Managing Complex Change in School](#) Nov 23 2022 Leading and managing change in schools is a complex topic. In this timely book the authors take the reader through a journey of how to lead and manage multidimensional change in order to create engaged learners, teachers, leaders and managers. They provide a readable and straightforward account of a major, high-profile innovation in one school and draw from it key lessons for leaders and managers of change in schools. [Managing Complex Change in School](#) synthesizes a wealth of literature and research on managing change, and shows how the emerging field of complexity theory can inform the effective management of multidimensional change. Arising from an in-depth, mixed methods evaluation of the key school, this book is practice-focused and is an invaluable companion for practitioners handling positive change in schools.

[Development Theory](#) Apr 23 2020 *Obra sobre las teorías del desarrollo en el tercer mundo, centrada en las estrategias para analizar el cambio en esta región. El resultado es un libro organizado en cuatro partes: una introducción a la naturaleza del análisis científico social; un examen de la obra de las principales figuras de las ciencias sociales de los siglos XVIII y XIX y de sus efectos en el siglo XX; un examen de las teorías del desarrollo del tercer mundo posteriores a 1945, y un estudio de los debates actuales sobre las estructuras globales y las reacciones de los agentes.*

[Complex Nonlinearity](#) Sep 28 2020 [Complex Nonlinearity: Chaos, Phase Transitions, Topology Change and Path Integrals](#) is a book about prediction & control of general nonlinear and chaotic dynamics of high-dimensional complex systems of various physical and non-physical nature and their underpinning geometro-topological change. The book starts with a textbook-like expose on nonlinear dynamics, attractors and chaos, both temporal and spatio-temporal, including modern techniques of chaos – control. Chapter 2 turns to the edge of chaos, in the form of phase transitions (equilibrium and non-equilibrium, oscillatory, fractal and noise-induced), as well as the related field of synergetics. While the natural stage for linear dynamics comprises of flat, Euclidean geometry (with the corresponding calculation tools from linear algebra and analysis), the natural stage for nonlinear dynamics is curved, Riemannian geometry (with the corresponding tools from nonlinear, tensor algebra and analysis). The

extreme nonlinearity – chaos – corresponds to the topology change of this curved geometrical stage, usually called configuration manifold. Chapter 3 elaborates on geometry and topology change in relation with complex nonlinearity and chaos. Chapter 4 develops general nonlinear dynamics, continuous and discrete, deterministic and stochastic, in the unique form of path integrals and their action-amplitude formalism. This most natural framework for representing both phase transitions and topology change starts with Feynman's sum over histories, to be quickly generalized into the sum over geometries and topologies. The last Chapter puts all the previously developed techniques together and presents the unified form of complex nonlinearity. Here we have chaos, phase transitions, geometrical dynamics and topology change, all working together in the form of path integrals. The objective of this book is to provide a serious reader with a serious scientific tool that will enable them to actually perform a competitive research in modern complex nonlinearity. It includes a comprehensive bibliography on the subject and a detailed index. Target readership includes all researchers and students of complex nonlinear systems (in physics, mathematics, engineering, chemistry, biology, psychology, sociology, economics, medicine, etc.), working both in industry/clinics and academia.

Managing Complex Educational Change Dec 24 2022 Why is educational change becoming more complex? Are there patterns in this complexity? How may managers cope effectively with complex educational change? This book investigates initiatives to reorganise school systems, involving highly emotive closures and mergers. It reveals how reorganisation was a complex change to manage because it was large-scale, componential, systematic, differentially impacting and context dependent. These characteristics affected management tasks, generating ambiguity in the change process that limited managers' capacity to control it. The authors offer four management themes as realistic strategies for coping with complex educational change: \*orchestration \*flexible planning and coordination \*culture building and communication \*differentiated support Managing Complex Educational Change is essential reading for all concerned with educational change - managers in schools and colleges, students on advanced courses, trainers, local and regional administrators, academics and policy makers. The research has general implications for the theory and practice of managing complex change.

Fort Stewart Complex, Mission Change Oct 22 2022

EBOOK: Leading Change in the Early Years Dec 12 2021 Leading Change in the Early Years focuses on the type of leadership skill needed for leading the reform and change agendas that challenge the early years sector. Early years professionals are expected to implement a range of government initiatives, as well as professionally endorsed changes, aimed at raising the quality of early years provision. The ease and success with which such initiatives are implemented relies on the competent leadership of change, that is, knowledge, understanding and expertise in encouraging, supporting and working with everyone involved with implementing and sustaining change. This resource helps to unpick the principles, processes and practice of effecting change and offers early years professionals a practical guide to the important elements relevant for meeting the political agenda for quality improvement and the professional challenge of effecting responsible change. Key content includes: the link between competent leadership and successful change dimensions, models and processes of change leadership skills for effecting change strategies for reducing reluctance and resistance This book is ideal for early years leaders who understand the general principles and practice of leadership, but who are interested in exploring and expanding their understanding and

expertise in leading reform and change. Jillian Rodd is an educational and developmental psychologist and has published widely in the early childhood field throughout the world. This is a powerful text that utilises the voices of early years leaders to clearly articulate the challenges of leading change and demonstrate how the sector is rising to that challenge. It is, therefore, an excellent and vital resource for all working in the early years sector and comes at absolutely the right time as the pace of change in the sector continues to be fast flowing. This book comprehensively and accessibly draws together theory and practice enabling a thorough exploration of the subtle nuances within current debates as to the interrelationship and interaction of leadership and change. The closing thoughts at the end of each chapter are inspired; not simply a summary of the chapter, but an opportunity to underline the importance of key issues. The constructive and helpful strategies offered throughout the text give considerable support for those charged with leading change in the early years sector and, consequently, should be on the bookshelf of every early years setting. Dr Caroline Leeson, Associate Professor of Early Childhood Studies, Plymouth University In a constantly changing world strong leadership and change management skills become of paramount importance and there is an increasing expectation that early years professionals are able to negotiate these domains. This text draws on research evidence and case studies from practice to support those dealing with change on a daily basis. By encouraging early years professionals to draw on their skills of leadership and interpersonal relationships, Jillian provides clear strategies to enact change. This is a 'must have' book for all those working in the Early Years. Nikki Fairchild, Early Years Initial Teacher Training Programme Coordinator, University of Chichester At a time when early years practitioners everywhere are feeling pressure to respond to the children's policy agenda, this accessible guide offers support in implementing and sustaining change. Underpinned by theoretical models, Rodd explores the relationship between leadership and quality and identifies the dynamics of change within the processes of leadership. The text is complemented by comments from a wide of practitioners illustrating how professionals in different contexts experience and respond to the complexity of change. Rory McDowall Clark, Senior Lecturer in Early Childhood, Worcester University Jillian Rodd gives a contemporary view of leadership and change incorporating the latest research from the early years sector. Practitioner voices are evident throughout the book and bring the text to life, helping to contextualise theory explained in the chapters to real issues practitioners encounter in everyday practice. The book provides insight to the complexities of leadership and change, essential understanding for both early years students and practitioners. Natalie Canning, Lecturer in Education - Early Years, The Open University This latest book from Jillian Rodd is timely as early childhood services continue to respond to the demands of policy and funding changes arising from continuing government interest in the early years. Another important application lies in responding to complexity arising from diverse communities and the challenges of improving and developing pedagogy and curriculum to enhance each child's learning and wellbeing. Currently there is little available that specifically addresses change in the early years. 'Leading change in the early years' progressively develops an argument that change is complex and multi-faceted, conceptualising change as encompassing quality improvement as a core function of early years services rather than as a special event to be managed. The role of leadership is presented as embedded within change where multiple leaders have responsibilities to contribute to change through building professional relationships that support collective endeavours within services. In recognising the complexity of change the work draws on current research offering comprehensive coverage of the issues and significant

factors associated with change, including the importance of establishing and nurturing a culture of learning within a service. This latest work is very accessible and will be invaluable for existing early childhood leaders, aspiring leaders and tertiary students. I have no doubt this book will be valued as a companion to the acclaimed Leadership in Early Childhood now in the 4th edition. Kaye Colmer, CEO Gowrie SA Change is the big 'c' word in contemporary educational environments. Information overload, turbulence and complexity characterise our everyday practice and our paths up ahead. The inevitability of change means we must be prepared and can be proactive in responding to external drivers, as well as in initiating reform. Most of all we must be willing to learn and to grow in our thinking. In this book, Jillian Rodd, a pioneer leadership researcher is once again, on the front foot, engaging early childhood readers with inquiry, insights and innovation. Rodd's approach to leading change makes it possible to embrace challenges as opportunities. This book is a 'must read' for intentional leaders seeking practical strategies for the everyday realities of early childhood settings. Manjula Waniganayake (PhD), Associate Professor at the Institute of Early Childhood , Macquarie University

Creating Change for Complex Children and their Families Feb 26 2023 The strain of caring for children struggling with severe and complex mental health needs affects the entire family. The staff at the innovative Croft Child and Family Unit have developed a unique approach of working intensively with the whole family, and encouraging them to share their experiences with other families, to instigate a complete change that will benefit all family members. Using detailed case studies to illustrate the model, the book focuses on the needs of children with a wide range of developmental, emotional and behavioural difficulties, and explores the complicated interactions between these children, their families and their communities. The care team includes nurses, psychiatrists, doctors, family therapists and creative therapists, social workers and teachers. They examine how to integrate a range of therapeutic interventions and how to use the powerful relationships that develop between professionals and families to enable positive, lasting changes. This book will be indispensable reading for trainees and professionals working with children with mental health problems and their families, and special needs educationalists wanting to understand the benefits of an intensive, multi-family approach to treatment for children who do not respond to standard community interventions.

Leading with Emotional Intelligence Jan 01 2021 Drawing on research into leadership and emotional intelligence, this book presents a framework that can lead to effective change implementation. Set against a backdrop of increasing complexity, volatility and uncertainty, the book responds to the need for organisations to continuously change and transform, and addresses the real challenges of effective implementation. Exploring these concepts at individual, team and organizational levels, Leading with Emotional Intelligence recognises the complexity of the topic and combines rigour with relevance to underpin the framework with empirical evidence.

Making Change in Complex Organizations Apr 28 2023 This book is written for the leader or management team of any complex organization attempting to lead an organization-wide change. Successfully leading change has never been easy. Many realities of life in the 21st century have combined to intensify the challenge. This book captures the lessons learned during more than 43 years of experience working in complex, large-scale organizations, 14

years between West Point and the United States Army and more than 29 years in two large, very different American companies. These lessons learned are shared in the hope that it will help others lead change successfully and avoid at least some of the pitfalls that come with it. The principles and questions in this book also benefit leaders making changes in the small organization or those who desire to transform their small organization into a large one. This book is intended to serve as a leaders' guide of things to think about and how to plan for successful change. Many books have been written about management and leadership, as well as the dos and must-dos of leading an organization. But few books discuss what it takes to make changes in today's complex organizations, and those that do are often written by consultants who have not practiced what they propose over any significant period of time. This book, by contrast, draws lessons from a successful long-term change made by leaders who had a personal and financial stake in the organization's success and saw the change all the way through.

hr "In my 40 years at Cummins one of the most successful changes made was our adoption of Six Sigma. When I became CEO it was clear that we needed to improve our product and overall business performance. We chose Six Sigma to help us do that. George's book concisely captures many of the things we had to think about when implementing Six Sigma throughout the company. I believe this is a good guide for any leader contemplating making an organization-wide change." Tim Solso former CEO Cummins, Inc. "As CEO I have discovered that just saying I want something done doesn't make it happen. Change done well is hard work. George's book is a practical go-to guide for driving lasting change." Tom Linebarger CEO Cummins, Inc. "In medicine today ever-higher quality has become an expectation. This expectation is causing us increasingly to transition from volume-based to value-based medicine. As an industry we are quickly adapting to this new value-based world. However, organizations don't transform easily. It requires dedicated and engaged teams to be leaders of change in their industry. I have been waiting for a book like this for years...whether you are a medical student or a senior attending physician...George Strodbeck's book on Making Change is a must read!!!" James Grant, M.D. Chair, Department of Anesthesiology Beaumont Health System, Royal Oak, Michigan "George Strodbeck draws on more than three decades of personal experience in planning and executing change in complex organizations. His incisive, fast-paced writing explains, engages and motivates. His guidance is candid about challenges faced but simultaneously practical and actionable in today's organizations. This book is for any leader seeking to accelerate the pace of change, improvement and innovation in their organizations." Mohan V. Tatikonda, PhD Professor of Operations Management Kelley School of Business, Indiana University

Choosing to Change Jun 25 2020 It is commonly quoted that the majority of change initiatives fail and equally common is the reasoning that failure is due to a lack of adequate planning and robust processes to deliver change to the organisation. However, organisations cannot change it is only the people in the organisation, and those connected with it, that can change the way they work, think and behave. Choosing to Change takes an alternative view of the change process, applying thinking from the studies of complexity to explore how change in organisations is driven by individual choice. How the totality of our individual experiences and our aspirations for the future shapes our thinking both consciously and unconsciously, setting out an approach that brings change by choice rather than process. It is an exploration of how choice is the basis of all successful change programmes and how that affects the theory of change management. Through the reflections of those who have experienced change. This book tackles how our expectations of the future will determine the choices made and is a vital

tool for managers, practitioners and advanced management students.

The Nature of Change or the Law of Unintended Consequences Feb 14 2022 This absorbing book provides a broad introduction to the surprising nature of change, and explains how the Law of Unintended Consequences arises from the waves of change following one simple change. Change is a constant topic of discussion, whether be it on climate, politics, technology, or any of the many other changes in our lives. However, does anyone truly understand what change is? Over time, mankind has deliberately built social and technology based systems that are goal-directed — there are goals to achieve and requirements to be met. Building such systems is man's way of planning for the future, and these plans are based on predicting the behavior of the system and its environment, at specified times in the future. Unfortunately, in a truly complex social or technical environment, this planned predictability can break down into a morass of surprising and unexpected consequences. Such unpredictability stems from the propagation of the effects of change through the influence of one event on another. The Nature of Change explains in detail the mechanism of change and will serve as an introduction to complex systems, or as complementary reading for systems engineering. This textbook will be especially useful to professionals in system building or business change management, and to students studying systems in a variety of fields such as information technology, business, law and society. Contents:What Do We Mean By Change?Some DefinitionsFailure by DesignInfluence, Boundaries and StructureChange in Complex SystemsPropagationModelling and Modelling MechanismsSimulationWhat Do We Do When a Change is Indicated?Implementing a SystemReal World Change: EUREKA ClassReal-World Change: Climate Readership: Students studying systems such as information technology, business, legal or social systems; professionals and academics in system building or business change management. Keywords:Change;Complex Systems;Socio-Technical;Systems Engineering;Information Technology;ManagementKey Features:This book is unique in addressing the mechanism of the phenomenon of change. It explains how and why waves of change sweep across a system, leaving unexpected consequences in their wakeProvides professionals who are system building, managing change in business or in any other spheres where change is happening, with a methodology to build systems in a continually changing environmentCan be used as an introduction to complex systems, or as complementary reading for systems engineering

Oilcrops complex: policy changes and industry measures. Fili è re ol é agineuses: é volution des politiques et des mesures sectorielles. présentation des principales tendances en matière de politique observées au cours de l'année considérée.

Change Sep 21 2022 Change is the embodiment of all DIVINE radiations that generate the eternal growth of Man, as he traverses life to experience what is necessary to return to the GLORY of GOD.

Global Cosmopolitans Nov 11 2021 As globalization creates the need for leaders who transcend national borders, this book provides an insider's view of what makes them special. This is the first book to present a framework for understanding this fast-growing and influential group and it provides tools for readers to discover their own inner competitive edge.

Geological Perspectives of Global Climate Change Aug 08 2021

Transformative Leadership in Education Feb 02 2021 In the volatile, uncertain, complex, and ambiguous world of education today, leaders need to take an engaged, activist, and courageous approach to help build optimistic futures for all students. Transformative Leadership in Education presents an alternative approach to leadership for deep and equitable change. Using vignettes, stories, research, and drawing on scholarship from a range of disciplines, noted scholar Carolyn M. Shields explores the concept of transformative leadership and its potential to create learning environments that are just and inclusive. Drawing on examples from transformative school leaders, Shields demonstrates that this leadership can promote academic achievement, family and community empowerment, democratic engagement, and global citizenship. Special features include: End-of-chapter guiding questions to help readers reflect on their own practice and to apply the concepts in their own contexts Vignettes and stories from students, teachers, and community members illustrate how transformative leadership can promote academic achievement and democratic engagement A robust companion website with extra resources, video and audio clips, and an author blog to further understanding and lead to sustained action toward the goals of transformative leadership. This exciting text will appeal to all aspiring and practicing leaders who want to prepare students to be successful, caring, and engaged citizens of the global community.

Oilcrops complex: policy changes and industry measures - Annual compendium - 2018 Oct 10 2021 The 2018 compendium offers an overview of salient government policies and related private sector measures concerning global and national markets for oilcrops and derived products. Its purpose is to facilitate the work of policy makers, market experts, analysts and other interested stakeholders by providing a short, concise, overview of policy developments relevant to the sector. Detailed news items are presented in tabular form (in English only), preceded by a brief discussion of the key policy trends observed in the year under review.

Managing Forests as Complex Adaptive Systems Aug 20 2022 This book links the emerging concepts of complexity, complex adaptive system (CAS) and resilience to forest ecology and management. It explores how these concepts can be applied in various forest biomes of the world with their different ecological, economic and social settings, and history. Individual chapters stress different elements of these concepts based on the specific setting and expertise of the authors. Regions and authors have been selected to cover a diversity of viewpoints and emphases, from silviculture and natural forests to forest restoration, and from boreal to tropical forests. The chapters show that there is no single generally applicable approach to forest management that applies to all settings. The first set of chapters provides a global overview of how complexity, CAS and resilience theory can benefit researchers who study forest ecosystems. A second set of chapters provides guidance for managers in understanding how these concepts can help them to facilitate forest ecosystem change and

renewal (adapt or self-organize) in the face of global change while still delivering the goods and services desired by humans. The book takes a broad approach by covering a variety of forest biomes and the full range of management goals from timber production to forest restoration to promote the maintenance of biodiversity, quality of water, or carbon storage.
