Shows how changes in work, family structure, women's roles, and other factors have caused people to become increasingly disconnected from family, friends, neighbors, and democratic structures--and how they may reconnect. Distinguished African American leaders provide solutions to the problems faced by young black men in the U.S., based on findings by a task force assembled in 1994 by the W.K. Kellogg Foundation. Chaired by Andrew Young, the Task Force founded its carefully researched recommendations largely

on grass roots programs around the country which have been successful in rebuilding lives and communities. This book provides a comprehensive, up-to-date, and theoretically-grounded approach to gangs and youth violence. It covers significant topics of interest to gang scholars and practitioners and, in doing so, serves to prepare students to work with gang members, develop and manage anti-gang programs, or engage in scholarly endeavors. The book introduces readers to the foundations of gang studies through the origins of gangs, definitions and categories of youth/street gangs (and the distinctions between these arguably different types), national and international trends, distinguishing features of serious street gangs, what works with gangs and what doesn't, and myths and realities. James Howell's extensive experience in this area allows access to the most authoritative national survey data on gang trends, providing insight into topics such as female gangs, migration of gang members, small-town gangs versus the major adult gangs in large cities, gang homicides and drug trafficking. In this thoroughly revised edition of *Managing Growth in America's Communities*, readers will learn the principles that guide intelligent planning for communities of any size, grasp the major issues in successfully managing growth, and discover what has actually worked in practice (and where and why). This clearly written book details how American communities have grappled with the challenges of planning for growth and the ways in which they are adapting new ideas about urban design, green building, and conservation. It describes the policies and programs they have implemented,

and includes examples from towns and cities throughout the U.S. “Growth management” is essential today, as communities seek to control the location, impact, character and timing of development in order to balance environmental and economic needs and concerns. *Managing Growth in America's Communities* addresses all of the key considerations: Establishing public roles in community development; Determining locations and character of future development; Protecting environmental and natural resources; Managing infrastructure development; Preserving community character and quality; Achieving economic and social goals; Respecting property rights concerns. The author, who is one of the nation’s leading authorities on managing community growth, provides examples from dozens of communities across the country, as well as state and regional approaches. Brief profiles present overviews of specific problems addressed, techniques utilized, results achieved, and contact information for further research. Informative sidebars offer additional perspectives from experts in growth management, including Robert Lang, Arthur C. Nelson, Erik Meyers, and others. This new edition has been completely updated by the author. In particular, he considers issues of population growth, eminent domain, and the importance of design, especially “green” design. He also reports on the latest ideas in sustainable development, “smart growth,” neighborhood design, transit-oriented development, and green infrastructure planning. Like its predecessor, the second edition of *Managing Growth in America's Communities* is essential reading for anyone who is interested in how

communities can grow intelligently. *Inequality in American Communities* is an empirical study of inequality in U.S. communities and its impact on individual Americans. The data for this study come from sample surveys in six American cities differing in size and region. In each survey, male heads of households were asked about attributes that ranked them in the system of inequality and about a variety of attitudes and behaviors that might be affected by their ranks. The analyses seek to determine how social rank affects various attitudes and behaviors and compare these effects from community to community.

Comprised of 12 chapters, this book begins with an overview of theoretical assumptions about community stratification, with particular reference to how a person's life is shaped by his position in a local structure of inequality. The discussion then turns to patterns of social stratification in six cities: Columbus (Ohio), Linton and Indianapolis (Indiana), and Yuma, Safford, and Phoenix (Arizona). The distributions of various rank variables, such as income and education, in these cities are described, along with the ways in which they are related to form systems of inequality. A basic model of the processes of stratification is also presented. The remaining chapters explore the consequences of social rank and cover topics ranging from social participation and political ideology to anomia and intolerance. This monograph will be of interest to sociologists. More people in communities of color are contracting, living with, and being treated for HIV/AIDS than ever before. In 2005, 71% of new AIDS cases were diagnosed in people of color. Though the number of racial and ethnic

minority HIV/AIDS cases continues to grow, the health care community has been unable to adequately meet the unique medical needs of these populations. African-American, Latino/Latina, and other patients of color are less likely to seek medical care, have sufficient access to the health care system, or receive the drugs they need for as long as they need them. HIV/AIDS in U.S. Communities of Color is an outstanding resource for any professional working with these underserved populations. Comprehensive chapters cover issues as far-reaching as: anti-retroviral therapy; dermatologic manifestations and co-morbidities of the disease in patients of color; unique risks to women and MSMs of color; participation of minority cases in HIV research; and substance abuse and mental health issues. Compiled by world experts in HIV/AIDS, this book analyzes the main causes of treatment failure and promotes respect for individual and cultural values, teaching readers to provide responsive, patient-centered care and devise preventive strategies for communities of color. Collection of essays by Chinese-American scholar Him Mark Lai; published in association with the Chinese Historical Society of San Francisco. The last half century witnessed a dramatic change in the geographic, ethnographic, and socioeconomic structure of Asian American communities. While traditional enclaves were strengthened by waves of recent immigrants, native-born Asian Americans also created new urban and suburban areas. Asian America is the first comprehensive look at post-1960s Asian American communities in the United States and Canada. From Chinese Americans in Chicagoland to

Vietnamese Americans in Orange County, this multi-disciplinary collection spans a wide comparative and panoramic scope. Contributors from an array of academic fields focus on global views of Asian American communities as well as on territorial and cultural boundaries. Presenting groundbreaking perspectives, Asian America revises worn assumptions and examines current challenges Asian American communities face in the twenty-first century. Political rhetoric and popular concern about the presence in the United States, Canada, and Western Europe of immigrants from predominantly-Muslim societies has remained largely detached from the actual reality of the lives and the contributions of these immigrants and their children. The studies presented here seek to correct this ignorant reaction by presenting objective information from schools that such immigrants have created and sustained. The first looked at seven explicitly-Islamic secondary schools, focusing on the formation of character and American citizenship, while the other studied public charter schools established by immigrants from Turkey, focusing on academic outcomes. Do faith-based schools cause social divisions? Do their students fail to become good citizens who can cooperate with those of other faiths? This familiar accusation against Catholic, and more recently against Evangelical, schools, is now directed against Islamic schools in Western societies. The studies presented here offer objective information from schools established by Muslim immigrants across the United States, with reassuring results. Praise for Muslim Educators in American Communities: "Dr. Charles Glenn takes us inside

US Islamic schools and offers a rare insight into the thoughts and emotions of young American Muslims. A must read for Non-Muslims as well as Muslims; his book provides a taste for those curious about what goes on in Islamic schools as well as evidence of the results of an Islamic School education." ~ Sufia Azmat, Executive Director Council of Islamic Schools in North America "Every wave of immigration throughout American history has brought with it an undertow of fear, often centered on the religious schools new immigrants form. In every instance, those fears have proven unfounded and so they are today. Through careful, on-the-ground research, Charles Glenn and colleagues take us into new Islamic secondary schools and discover the important role these faith-based schools are playing in forming virtuous citizens capable and committed to being a positive influence within American civic life. This book is a valuable and timely contribution." ~ James Davison Hunter, Institute for Advanced Studies in Culture University of Virginia A leading advocate for immigration reform interviews a wide range of citizens from communities throughout the nation to gauge the level of acceptance of new immigrants. This compelling approach to the immigration debate takes the reader behind the blaring headlines and into communities grappling with the reality of new immigrants and the changing nature of American identity. Ali Noorani, the Executive Director of the National Immigration Forum, interviews nearly fifty local and national leaders from law enforcement, business, immigrant, and faith communities to illustrate the challenges and opportunities they face.

From high school principals to church pastors to sheriffs, the author reveals that most people are working to advance society's interests, not exploiting a crisis at the expense of one community. As he shows, some cities and regions have reached a happy conclusion, while others struggle to find balance. Whether describing a pastor preaching to the need to welcome the stranger, a sheriff engaging the Muslim community, or a farmer's wind-whipped face moistened by tears as he tells the story of his farmworkers being deported, the author helps readers to realize that America's immigration debate isn't about policy; it is about the culture and values that make America what it is. The people on the front lines of America's cultural and demographic debate are Southern Baptist pastors in South Carolina, attorneys general in Utah or Indiana, Texas businessmen, and many more. Their combined voices make clear that all of them are working to make America a welcome place for everyone, long-established citizens and new arrivals alike. Especially now, when we feel our identity, culture, and values changing shape, the collective message from all the diverse voices in this inspiring book is one of hope for the future. Now in paperback with a new preface. This book builds upon its previous edition by comprehensively updating important epidemiologic and clinical content of the HIV continuum amongst Black and Latino individuals of the United States, including the epidemiology, prevention, diagnosis, and treatment of HIV within these diverse communities. Illuminating current diagnostic and prevention considerations, as well as its evidence base, the text highlights important

concepts and integrates critical aspects of the structural and social environment, such as mass incarceration and neighborhood-level disadvantage, that compromise our ability to decrease HIV risk and improve outcomes. Discussion regarding significant predictors of health inequity, including discrimination, medical mistrust, and stigma, specifically homophobia and transphobia, are included. The book also reviews the impact of significant advances in HIV prevention, such as pre-exposure prophylaxis (PrEP), within Black and Latino communities. Written by experts in their field, this second edition of HIV in US Communities of Color is a comprehensive and dynamic resource for all health care providers who support the care and treatment of Black and Latino individuals at risk for or living with HIV.

Utopian communities in American from 1680 to 1880, including the Shakers, New Harmony, Brook Farm, the Fourieristic phalanxes, and the Oneida communities, with accounts of the constitutions, revelations, beliefs, tenets, customs dictated by religious beliefs or social principle, and more. This report examines the disaster resilience efforts of the executive and legislative branches of government and public-private partnerships. As a newly minted librarian, Heller volunteered at a grassroots independent library founded to bring together the work of disparate art communities of Chicago. Since then she has participated in many library technology communities with stints on boards, working groups, conference planning committees, and social media-based outreach. Grounded in her research of dozens of community tech projects, Heller presents a guide

exploring how they work, how to get involved, and how to make them better. Library technology managers, grantmakers, scholars, and project managers will all benefit from Heller's incisive discussion of such topics as a historical overview, including the humble beginnings of OCLC and early library computerized cataloging projects, that offers lessons for today; how to find community needs that match your motivation; using personas to learn about community members; choosing a name and legal structure for a new community; five in-depth case studies, including Project Bamboo, Hathi Trust, and the Digital Public Library of America; techniques for project management, documentation, and discussion; forging a path from small, grant-funded projects to a sustained collective good; reconciling hacker ideology and geek culture with inclusive communities; proven methods for supporting tasks and emotions in library tech communities; and successes and challenges of vendor user groups. For readers who want to get started with community technology projects, as well as those who are already engaged in collaborations, the techniques and best practices in Heller's guide will provide the tools and inspiration to make better library technology communities. What is a suburb, and how is it different from a city or rural community? Readers find the answers to these questions and more through accessible text that reflects early social studies curriculum topics. Suburban communities are common across the United States, and readers explore one such community through accessible text and colorful photographs. While the close relationship between the text and photographs enhances

reading comprehension skills, a detailed picture glossary aids in vocabulary development. A suburb is a fun place to live, and readers see why as they learn about this kind of community. An insightful text exploring health disparities in Asian American populations

In the newly revised Second Edition of *Applied Population Health Approaches for Asian American Communities*, a team of distinguished public health experts delivers a groundbreaking resource providing an in-depth examination of the social, political, economic, and cultural forces shaping Asian American health today. Integrating up-to-date applied public health research for assessing health interventions and programs relevant to Asian American communities and other groups that have been historically marginalized, this book highlights the different frameworks, research designs, and other methodological considerations for reaching Asian American and other ethnic communities. In the latest edition of the book, readers will find contextual explorations of the Asian American population in the United States, as well as discussions of the measurement of health and risk across the lifespan in Asian American groups. It also includes:

- New and updated case studies showcasing the application of different frameworks and research designs
- Methodological considerations for reaching Asian American and other vulnerable and underserved communities
- Examples of successful implementations of community engagement and community-based participatory research.

A valuable resource for all levels of health professionals, practitioners, and community advocates, *Applied Population Health*

Approaches for Asian American Communities remains the leading reference for anyone conducting or studying health disparities in Asian American communities or other groups that have been marginalized. "Investing in What Works for America's Communities' is a new book that calls on leaders from the public, private, and nonprofit sectors to build on what we know is working to move the needle on poverty. The book's impressive list of authors represents a broad range of sectors including federal agencies, philanthropy, housing academia, health, and the private sector. This collection of essays provides dozens of innovative ideas that can bring new opportunities to America's struggling communities. It calls on leaders, from the public, private, and nonprofit sectors to recognize that they can work smarter and achieve more by working together."--Book website. Many Black people in America have begun regressing from the advances made by their ancestors. A people who once strived to become educated, invested in families and communities, and worked hard to advance in other areas of their lives, have taken an alternate path along the way. This path has distorted the thinking process of many African Americans, leading to the adaptation of negative trends, linked to poor decision making. These unfavorable circumstances have increased the percentages of African Americans suffering from a lack of education, broken homes and communities, high rates of preventable health problems and diseases, and behaviors that display a sense of self hate. This is not to negate or ignore the fact that there are many visible and hidden disparities in America assisting in the

dysfunctional state of many African American communities, it is to identify avoidable behaviors and decisions being made by many Black people, causing this rapid rate of regression. These factors have led to the unnatural state of many Black communities in America. In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. Gated communities are a new "hot button" in many North American cities. From Boston to Los Angeles and from Miami to Toronto

citizens are taking sides in the debate over whether any neighborhood should be walled and gated, preventing intrusion or inspection by outsiders. This debate has intensified since the hard cover edition of this book was published in 1997. Since then the number of gated communities has risen dramatically. In fact, new homes in over 40 percent of planned developments are gated in the West, the South, and southeastern parts of the United States. Opposition to this phenomenon is growing too. In the small and relatively homogenous town of Worcester, Massachusetts, a band of college students from Brown University and the University of Chicago picketed the Wexford Village in November of 1998 waving placards that read "Gates Divide." These students are symbolic of a much larger wave of citizens asking questions about the need for and the social values of gates that divide one portion of a community from another. In recent years, American shoppers have become more conscious of their food choices and have increasingly turned to CSAs, farmers' markets, organic foods in supermarkets, and to joining and forming new food co-ops. In fact, food co-ops have been a viable food source, as well as a means of collective and democratic ownership, for nearly 180 years. In *Food Co-ops in America*, Anne Meis Knupfer examines the economic and democratic ideals of food cooperatives. She shows readers what the histories of food co-ops can tell us about our rights as consumers, how we can practice democracy and community, and how we might do business differently. In the first history of food co-ops in the United States, Knupfer draws on newsletters,

correspondence, newspaper coverage, and board meeting minutes, as well as visits to food co-ops around the country, where she listened to managers, board members, workers, and members. What possibilities for change—be they economic, political, environmental or social—might food co-ops offer to their members, communities, and the globalized world? Food co-ops have long advocated for consumer legislation, accurate product labeling, and environmental protection. Food co-ops have many constituents—members, workers, board members, local and even global producers—making the process of collective decision-making complex and often difficult. Even so, food co-ops offer us a viable alternative to corporate capitalism. In recent years, committed co-ops have expanded their social vision to improve access to healthy food for all by helping to establish food co-ops in poorer communities. A city is an exciting place to live. It has tall buildings, many people, and a variety of ways to get from place to place. Readers learn what life is like in an urban community, and, in doing so, they explore important early social studies curriculum topics. Accessible, relatable text closely corresponds to vibrant photographs to help readers develop comprehension skills. A picture glossary is also included to aid in vocabulary building. Readers will enjoy discovering fun facts about big-city life with each turn of the page. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see

We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. Hearing held before the U.S. Comm. on Civil Rights in L.A., CA, June 15-17, 1993. Unsettling episodes beginning with & emanating from the beating of Rodney King, a black man, by several white L.A.P.D. officers in Mar. 1991, confirmed the prior opinion of the Comm. that the tensions between racial & ethnic groups in L.A. required attention. During the 1993 hearing, the Comm. concentrated on 3 areas: (a) the administration of justice -- relating to police practices & policies; (b) economic development -- pertaining to unemployment, the L.A. Transportation System, job training & small bus. initiatives; & (c) the portrayals or projections of minorities through TV in both news & entertainment production. While the nation's GDP has doubled in the last thirty years, significant increases in family income have been restricted to a small subset of the American population. This

disjunct between national economic growth and stagnating incomes in all but the very top tier of the population corresponds with increasing economic inequality and a lack of social and economic mobility. As a consequence, neighborhoods and metropolitan areas have become more polarized. Stark geographic differences in levels of poverty, income, health outcomes, job opportunities, lifetime earning potential, and educational attainment highlight the degree to which place matters in terms of social and economic opportunity. *Shared Prosperity in America's Communities* examines this place-based disparity of opportunity and suggests what can be done to ensure that the benefits of economic growth are widely shared. Contributors' essays explore social and economic mobility throughout the country to illuminate the changing geography of inequality, offer a portfolio of strategies to address the challenges of place-based inequality, and show how communities across the nation are implementing change and building a future of shared prosperity. Approaching the problem from the vantage point of economics, sociology, and public policy, *Shared Prosperity in America's Communities* offers a timely analysis of the country's growing socioeconomic and geographic division and shows how communities can respond to the challenge of economic inequality to build a nation of opportunity for all. Contributors: J. Cameron Anglum, Timothy J. Bartik, Chris Benner, Angela Glover Blackwell, Anthony P. Carnevale, Raj Chetty, Rebecca Diamond, Lei Ding, Paul A. Jargowsky, David N. Karp, Elizabeth Kneebone, Douglas S. Massey, Jeremy Nowak, Manuel Pastor, Victor Rubin, Chris Schildt,

Nicole Smith, Margery Austin Turner, Susan M. Wachter, Zachary D. Wood. More people in communities of color are contracting, living with, and being treated for HIV/AIDS than ever before. In 2005, 71% of new AIDS cases were diagnosed in people of color. The rate of HIV infection in the African-American community alone has increased from 25% of total cases diagnosed in 1985 to 50% in 2005. Latinos similarly comprise a disproportionate segment of the AIDS epidemic: though they make up only 14% of the U.S. population, 20% of AIDS cases diagnosed in 2004 were Latino/a. Though the number of racial and ethnic minority HIV/AIDS cases continues to grow, the health care community has been unable to adequately meet the unique medical needs of these populations. African-American, Latino/Latina, and other patients of color are less likely to seek medical care, have sufficient access to the health care system, or receive the drugs they need for as long as they need them. HIV/AIDS in Minority Communities acknowledges the prevalence of HIV/AIDS within minority communities in the U.S. and strives to educate physicians about the barriers to treatment that exist for minority patients. By analyzing the main causes of treatment failure and promoting respect for individual and cultural values, this book effectively teaches readers to provide responsive, patient-centered care and devise preventive strategies for minority communities. Comprehensive chapters contributed by physicians with extensive experience dealing with HIV/AIDS in minority communities cover issues as far-reaching as: anti-retroviral therapy; dermatologic manifestations and co-morbidities of the

disease in patients of color; unique risks to women and MSMs of color; participation of minority cases in HIV research; and substance abuse and mental health issues.
